The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in comparing a bloadcative molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus cuseful for treating cardiac insufficiency disorders. PRO1154 and PRO1186 stimulate adrenal cortical capillary endothelial growth, and PRO5136, PRO4136 and PRO1367. PRO41360 and PRO1387 induce c-fos in endothelial growth, and PRO5136, CC PRO413, PRO828, PRO826, PRO819, PRO1126, PRO1387 induce c-fos in endothelial cells, and are thus useful for treating cancerous tumours. PRO812 inhibits vascular conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular condothelial growth in cells and is thus useful for inhibiting endothelial cell growth in condothelial growth in condothelial growth in condothelial growth in condothelial cells and is thus useful for inhibiting tumour growth. PRO826, PRO184, PRO184, PRO8184, PRO826, PRO1068 or PRO1132 enhances survival profiteration of stimulated T-lymphocytes and are therapeutically useful for renating retinal condothers of injurles, e.g. retinitis pigmentosum, AMD. PRO819, PRO813 end disorders of injurles, e.g. retinitis pigmentosum, AMD. PRO819, PRO813 and therefore are useful for treating kidney disorders associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eaton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ferrara N, Fong S, Gerber H, Gerritsen ME, Goddard A,

                                                                                                                                                                                                                         decreased mesangial cell function such as Berger disease or other nephropathles associated with dermatitis, herpetiformis or Crohn's disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the proliferation and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This is the amino acid sequence of a novel human PRO protein.

Sequence 27419, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION: Rated al.
GENERAL INFORMATION: WUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: A BRUGIANGA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-02-18
PRIOR PAPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
WUMBER OF SEQ ID NOS: 33142
SEQ ID NO 27419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              90 PRHRRCCYNGCAYACLEAVPPPVLDWLVQPKPRWLGGNGWLLDGPEEVLQAEACSTTED 149

TILE OF INVENTOR: Zsig33-like Peptides
FILE REFERENCE: 00-30
CURRENT APPLICATION NUMBER: US/09/853,253
CURRENT APPLICATION NUMBER: 05/203,300
PRIOR PILING DATE: 2001-05-10
NUMBER OF SEQ ID NOS: 28
SEQ ID NO 2
LENTH: 117
              TYPE: amino acid
STRANDENNESS: single
TOPOLOGY: linear
MOLECULE TYPE: protein
FRAGMENT TYPE: internal
SEQUENCE DESCRIPTION: SEQ ID NO: 2:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 268, Application US/09989722 Patent No. US20020072067al GENERAL INFORMATION:

  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                 The invention relates to zaig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones.

The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZSIG33 expression.

The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 mediate the presence of similar nucleic acids in samples, and therefore which patients may be in the production of antibodies against ZSIG33 and in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG31 in samples (e.g. by enzyme linked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the condition of digestive enzymes and hormones, and/or secretion of enzymes and/or hormones in the pancreas. ZSIG33-like bobt is used in gene therapy. The present sequence of the contraction of any part of the contraction of any part of the contraction of the present sequence of the contraction of the procession and the pancreas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to zsigi3-like peptides (2531EP) including zsigi3-linker, zsigi3-beta, zsigi3-gamma, zsig-33-delta and zsigi3-linker, zsigi3-beta, zsigi3-gamma, zsig-33-delta and zsigi3-linker, zsigi3-beta, zsigi3-gamma, zsig-33-delta and zsigi3-like peptides. Zsile peptides actid molecules encoding such casigi3-like peptides. Zsile peptides actid molecules encoding such patients such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and solate receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic preparations containing glucose and as adsorption enhancers for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation of prowth factor and hormone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These collocations are useful for treating disorders associated with anatholate and growth related diseases. ZS31EP peptides, nucleic actids and/or antibodies are useful for treating disorders associated and contractine and actids and growth related diseases. ZS31EP peptides, nucleic actids and actids and growth related diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33-linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ghrelin; preproghrelin; GHS-R lb; benign prostatic hyperplasia; therapy; breast; cervical; uterine; choriocarcinoma; prostate; ovary; cytostatic; cancer; human.
                                                                                                                                                                                                                         nutrient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             with gastrointestinal contractility, secretion of digestive enzymes, normone and acids, secretion of hormones in the pancreas and/or brain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentration acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the peptides comprising are an antibody specific for a peptide of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with an accompanying side effects. The present sequence represents a ghrelin type growth hormone secretagogue (GHS) precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Zsig33; gastric motility; gastrointestinal inflammation; reflux disease;
nutrient absorption regulation; obesity; metabolic disorder.
                                                                New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 116;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                             breast cancer, or benign prostatic hyperplasia, by detecting the expression of a ghrelin, an exon-3 deleted preproghrelin and/or a {\rm GHS-R}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method for identifying a cancer cell or tissue of the reproductive system by detecting expression of a ghrelin, an exon-3 deleted preproghtelin and/or a GHS-H b proteins or nucleic acids. The antibodies, exon 3-deleted form of preproghtelin and antagonists are useful for treating cancer of the reproductive system such as prostate, ovarian, breast, cervical or uterine cancer, choricoarcinoma or benign prostatic hyperplasia. The present sequence is human exon 3-deleted ghrelin protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Growth hormone secretagogue; GHS; ghrelin; precursor; preproprotein; calcium concentration elevation; infant growth disorder; growth hormone deficiency.
                                                                                                                                                                                                                                                                                                                                         Identifying a cancer cell or tissue for treating prostate, ovarian,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                  The present sequence represents a protein designated Zsig33. The nucleic acids are strongly expressed in stomach tissue. The polypeptide (or allelic variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated with gastrointestinal cell contractility, secretion of digestive enzymes/acids, gastrointestinal motility, recruitment of digestive enzymes, gastrointestinal inflammation, reflux disease and nutrient ebsorption regulation. Zsig33 polypeptides may also be important neurologically, since the family of gut-brain peptides to which the homologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satisty or treat obesity and other metabolic disorders where neurological

Antional Deptide containing process with the HSPP-14. HSPPs have the Antional Deptide containing process. Antional Deptide containing process. Antional Deptide containing process. Antional Deptide containing process. And can neuroprotective, cardiovascular and antiasthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation activity or function of HSPP. Such diseases include cell proliferation of HSPP are used to treat or prevent diseases include cell proliferation of HSPP are or function of HSPP. Such diseases include cell proliferation or including cancer), inflammation, cardiovascular, neurological, carthwas, Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's Parkinson's or Huntington's diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP cucleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy, as antisense, corgenetic variations, and for chromosomal mapping. HSPP are also used to matagonists (potential therapeutic agents). Ab are used to diagnose, or monitor, HSPP-related diseases (in usual immunoassays), as therapeutic cancagonists, in competitive drug screens, and for purification of HSPP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                           The Invention relates to human nucleic acids (AAIS7798-AAI61369) and the ancoded polypeptides (AAM3642-AAM42213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as lateral socierosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and incluments.

The invention relates to a method of forming a reversible peptidereceptor complex that involves providing an immobilized receptor, and contacting the receptor with a zsig33 peptide (Comprising residues 24-37 of AAB62649), where the receptor builds to the zsig33 peptide. The method is useful for purifying cells, purifying a peptide, stimulating signal transduction in a cell expressing a receptor. It is also useful for modulating secretion of hormones, neural development and/or utilization, gastric contractility, nutrient uptake, secretion of digestive and parcreatic enzymes and hormones, secretion of insulin-like growth factor. It is secretion of non-zsig33 proteins. It is useful for modulating growth cormone secretion in a mammal having a disease associated with abnormal common secretion of non-zsig33 proteins. It is useful for modulating growth hormone, such as osteoporosis, bone repair, bone remodeling, low osteoblast levels, cartilage repair and remodeling, skeletal dysplasia, immune suppression, obesity, growth retardation, skeletal dysplasia, immune suppression, obesity, growth retardation, dwarfism, wound healing and ovulation induction, treating a mammal having a metabolic disorder requiring neurological feedback, such as satiety requalation, glucose absorption and metabolism and neuropathy-associated gastrointestinal disorders, and stimulating glucose-induced insulin release in a mammal. The present sequence represents the human zaig33 polypeptide, a peptide ligand for the G-protein coupled receptor, GHS-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SGIP; zsig33; anorectic; antidiabetic; somatotropin; somatomedin-C; nutritional absorption modulator; growth hormone secretagogue;
Forming reversible peptide receptor complex for purifying cell and peptides, stimulating signal transduction and modulating hormone secretion, involves contacting a receptor with zsig33 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                             The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the stomach, and at lower levels in the small intestine and pancreas. A novel peptide fragment of zsig33, termed SGIP (see Secretagoque receptor, and is therefore useful for modulating secretion of growth hormone and insulin like growth factor 1. SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jejunum tissue, andulating pancreatic secretion of hormones and digestive enzymes, inducting growth hormone secretion, and modulating gastric emptying.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Growth hormone secretagogue; GHS; ghrelin; precursor; preproprotein; calcium concentration elevation; infant growth disorder; growth hormone deficiency.
                                                                                                                                                                                            Novel variants of SGIP peptides for modulating contractility in duodenum or jejunum tissue, pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion or modulating gastric emptying -
                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one manno acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a local encompasses the unmodified peptides; the DNA encoding the peptide is also encompasses the unmodified peptides; the DNA encoding the peptides comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with the compounds of the invention are safe with the present sequence represents and an accompanying side effects. The present sequence represents a
                                                                                                                                                                                                     New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis of infant growth disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ghrelin-type growth hormone secretagogue (GHS) precursor protein
of the invention.
